

Don't blow up your computer!

**Do NOT forward dangerous emails...use snipping tool!**

People have been very suspicious of emails lately. I am so glad you are thinking before you click, but ...please do NOT **forward** any suspicious, potentially dangerous emails to anyone! Not to the help desk, not to me, not to someone you think has their email compromised. NOT EVER!

The best thing to do is use snipping tool and send that along. No danger there. Here is an example of that. I have Ask Diane on how to get snipping tool.

Here is a link to the archived article...

<http://www.fdlrez.com/MIS/askdiane/SnippingToolInsteadofScreenShot.pdf>

Notice it is underlined and in blue. If you hover your mouse over it you can be directed to the website. That is a "live link"

When an email is forwarded all the dangerous stuff goes with it. If you don't know what a live link is give me a call and we can discuss this.
